

NAFFCOOL # 60C
Hydrocarbon Cleaning Fluids

Description

NAFFCOOL # 60C is a rapid drying solvent compound of chlorinated hydrocarbon, petroleum distillates and various organic solvents designed to give fast penetrating action and cleaning.

Suggested Uses

- **Excellent degreaser and may be used for any solvent cleaning operations**
- **May be used on any metal and most electrical wiring and insulation**
- **It may be applied in a non-atomizing spray method**
- **Nonflammable so called safety solvent**

Safety

NAFFCOOL # 60C contains chlorinated hydrocarbons and petroleum distillates. Even though it is considered relatively nontoxic, it will cause defatting of the skin. Contact should be avoided. Also, the material should be used with adequate ventilation.

Recommended Uses

NAFFCOOL it 60C was primarily designed as replacement for the more toxic solvents is normally used in the final hand degreasing of finished product. It is much less toxic than Carbon Tetrachloride (TCE)
